

ABSTRACT OF THE DISCLOSURE

Disclosed methods and systems relate to enabling a beauty analysis. One of the methods involves facilitating display, on a display device, of a plurality of templates, wherein at least some of the templates are representative of a portion of a face having a simulation of use of a beauty product. The method also involves enabling selection of at least one of the displayed templates. The method further involves facilitating display, on the display device, of a simulated facial image including at least one displayed facial portion having a simulation of use of a beauty product, wherein the displayed facial portion having a simulation corresponds to the at least one selected template.
